

Question 4 – Solid model 1

Unit system: MMGS (millimeter, gram, second)

Decimal places: 2

Part origin: Arbitrary

Material: 1060 Alloy

Density = 2700 kg/m³

All holes through all unless shown otherwise

-Use the following parameters and equations which correspond to the dimensions labeled in the images:

A = 50 mm

B = 10 mm

C = B + 20

(To save the most time, make use of linked dimensional values and equations.)

(Save each part after every question in a different file, so you can review your work)

-Measure the mass of the part.

What is the mass of the part (grams)?

a. 364.44

b. 345.94

c. 323.56

d. 355.22

Question 5 – Solid model 1: Update parameters

Unit system: MMGS (millimeter, gram, second)

Decimal places: 2

Part origin: Arbitrary

Material: 1060 Alloy

Density = 2700 kg/m³

All holes through all unless shown otherwise

-Use the following parameters and equations which correspond to the dimensions labeled in the images:

A = 50 mm

B = 15 mm

C = B + 20

(To save the most time, make use of linked dimensional values and equations.)

(Save each part after every question in a different file, so you can review your work)

-Measure the mass of the part.

What is the mass of the part (grams)? _____ 271,68 g
